PROJECT REPORT

Of

BAMBOO STICKS PRODUCTION

PURPOSE OF THE DOCUMENT

This particular pre-feasibility is regarding Bamboo Sticks Production.

The objective of the pre-feasibility report is primarily to facilitate potential entrepreneurs in project identification for investment and in order to serve his objective; the document covers various aspects of the project concept development, start-up, marketing, finance and management.

[We can modify the project capacity and project cost as per your requirement. We can also prepare project report on any subject as per your requirement.]

PROJECT REPORT ON BAMBOO STICKS PRODUCTION UNIT FOR INCENSE STICKS

EXECUTIVE SUMMARY

Agarbatti/Incence Sticks production is a well-established cottage industry and is a 5 crore worth growing market in India. Base material for incense sticks is bamboo stick which accounts for one third of its weight. Cost of bamboo is only about one percent of the final finished product but is the most essential raw material for agarbatti production. However due to shortage of gregarious flowering of the major species of bamboo used in stick production i.e. Muli bamboo, there can be shortage of raw material and decrease in supply of sticks. Further, due to decrease in import duty from 30% to 10% on bamboo sticks, 70% of bamboo needs of agarbatti industry are fulfilled by imported bamboo sticks from China and Vietnam. The imported bamboo sticks are better with respect to uniformity of dimensions and quality because of large scale mechanization.

Bamboo Mission is focusing on development of bamboo sector through encouraging bamboo plantations and introducing mechanization .Now, with focus of Govt. on this sector the Industry move to mechanized stick production process as a full-fledged business activity.

INTRODUCTION

In India, the burning of incense in religious and social functions across all communities is being practiced since early times. Agarbatti which was once a staple feature of Indian devotional activities has now branched out as products associated with aromatherapy, meditation and yoga. Agarbatti sector of India is largest in the world. Agarbatti production is a well-established cottage industry and is a 5 crores worth growing market in India.

Though India is second in bamboo production, a large part of agarbatti industry is importing 70% of its bamboo needs Despite availability of a large number of species of bamboo, the most commonly used species for stick production are *M. Baccifera* (Muli), *Bambusa vulgaris* (Bari), *Bambusa tulda* (Mritinga), *Bambusa balcooa* (Barak) and *Dendrocalamus longispathus* (Rupai).

As compared to manual sticks produced in India, the imported bamboo sticks on the whole are better with respect to uniformity of dimensions and quality

THE PROJECT

Stick making process in India is moving towards mechanization. However, countries like China and Vietnam are producing mechanized sticks. The present project is for establishment of round bamboo sticks production unit for agarbattis by using mechanized process. Agarbatti industry uses two kinds of bamboo sticks- square and round. By manual process only square sticks are produced. However, with rising exports, demand for round bamboo sticks has risen. The length of sticks vary from 8 to 10 inches, however majority of incense sticks (70 to 80%) is 8 inches (20.32cm). The units shall procure bamboo sticks from the collectors who collect the bamboos from the forest as well as from growers of bamboo plantations and produce round sticks of 8"to 9" by mechanized process as demanded by the Indian agarbatti sector using high processing technology. High processing technology will maximize utilization of bamboo material and produce quality output. This will help the entrepreneur to compete with the sticks imported from China and Vietnam. Still wastage of bamboo (nodes, green strips, fibers etc.) is estimated to be 40%. These wastes can be used as fuel for drying unit of bamboo sticks. Selling the waste to bamboo charcoal unit shall also be explored for effective waste management.

STRATEGIES:

Following strategies shall be followed for implementation of the project:

- 1. Proper monitoring of quality at each stage from procurement of raw material to packaging of finished product by applying proper supervision and quality checks.
- 2. Procurement of latest machinery for mechanizing the entire process.
- 3. Market surveys for production of stick as per market trend at competitive price.
- 4. Branding of the bamboo sticks.
- 5. Tie-ups with e-commerce websites and logistic partners.
- 6. Coordination with various Govt. agencies for Training and support.
- 7. Participation in trade fairs

FEASIBILITY ASSESSMENT:

Technical Analysis: The location of the Unit near the raw material site is an advantage as the raw material is available in abundance. Secondly, well connected districts with roads will aid in transportation/ distribution of finished goods to be easy as well as cheap. Labour is easily available at a cheaper cost. The labours are involved in manual stick making as a part-time activity therefore transition to mechanized stick making won't be a difficulty as they already know the basic flow of the process.

As per the requirement of agarbatti industry the project aims to produce 8" and 9" round bamboo sticks by following a mechanized process. The process of making bamboo sticks by mechanized process involves the following steps:

Sorting, grading and packaging

| The machines used for th | e above processes | are as follows: |
|--------------------------|-------------------|-----------------|
|--------------------------|-------------------|-----------------|

| Process | Machinery |
|--------------------------------------|--------------------------------|
| Cross cutting of bamboo poles to | Bamboo cross cutting machine |
| cylinders | |
| Splitting the cylinders into slats | Bamboo manual splitter machine |
| Making of slivers from slats of | Bamboo heavy duty sliver |
| uniform thickness | making machine |
| Making bamboo sticks from slivers | Bamboo round stick machine |
| Polishing Bamboo sticks | Bamboo stick polishing machine |
| Sizing of bamboo sticks into desired | Bamboo sticks sizing machine |
| length | |
| Drying of bamboo sticks | Open air or Dryer machine |

Latest machines with desired parameters will be imported from suppliers of China or Vietnam. List of required machines along with estimated price is given at Annexure I.

Generally, these bamboo sticks will be packed in bundles of one kg. However the packaging can be modified as per precise demand and requirement of the buyers. Heavy rainfall occurs from July to September and as the bamboos regenerate during this period therefore the production activity will only be for 9 months in a year. Capacity utilization of the unit can be 80% for the first 5 years.

- **Commercial Feasibility:** Only raw material for production of bamboo sticks is bamboo pole which is available in abundance. With policy initiatives focusing on bamboo plantations, availability of raw material can be assured.
- **Market Analysis:** There is a huge requirement of bamboo sticks from India agarbatti market and quality bamboo sticks sell like a hot cake. India accounts for over 70% consumption of the world incense stick market. Indian agarbatti market amounts to Rs.6000 crore out of which Rs.2000 crore is in organized market.
- The incense stick makers range from small fragmented units to small factories to FMCG giants. Between FY2012 and FY2016, India exported agarbattis worth \$498.02 million. In addition, annual exports witnessed an 11.57% growth during the same period, from \$89.64 million in FY2012 to \$100.02 million in FY2016.

INDUSTRY ANALYSIS:

SWOT Analysis of bamboo stick industry of India is as follows:

| STRENGTHS | WEAKNESSES |
|--|--|
| a. Availability of abundant raw material b. Availability of local skill for making bamboo sticks c. Trade relations already with end user industry d. Low labour cost e. No substitute for bamboo sticks likely to be available for end user industry. | a. Industry in the clutches of a few traders b. Bargaining power of bamboo stick maker is low. c. Lack of entrepreneurial talent to drive a local industry |
| <u>OPPORTUNITIES</u> | THREATS |
| a. Ever growing domestic market b. Introduction to mechanization for improving the productivity. c. Initiatives of the Govt. for development of the sector through | a. High Competition from China and Vietnamb. Change in Govt. policiesc. Shortage of raw material due |
