JUTE WALL HANGING MANUFACTURING

Introduction: Among the subtropical regions of Asia, specially India, Bangladesh and China are most popular for Jute. Jute craft is most popular in this region and is derived from the fibre of a reed like plant. West Bengal's humid climate with plenty of rainfall is best suited for this plant. The plant grows to a height of 3-4 meters and takes up to six months to mature. Jute is the second most popular natural plant fibre and is available in abundance. Once the plant is ready for harvesting, it is cut very close to the ground and left in the ground for a day or two when the leaves fall off.
